USA models from GANS 89515 onwards

Up to GANS 105501 the circuit left the starter solenoid with a brown wire and went via Terminal "B" of the control box and then into the ignition switch.

Between GANS 89515 and GANS 138800 the green wire left the fuse box and went to the back of the tach before going on to Brake Switch.

For the USA 1975 model year only, the wiring circuit was altered so that the lead for the reverse lamp circuit went directly
