The 1098 & 1275cc engine responds well to a large bore exhaust system improving both power and torque.

Designed specifically for Sprites & Midgets, this one-piece manifold is the same as the original Leyland competition unit.

The area close to the 1098cc chassis will need relieving to allow the manifold to clear. For maximum power use our sports exhaust XEXS150.

If fitting to a standard system, the down pipe will need to be cut to suit the new joint position.
