These are a completely new design using modern technological advancements. No old cam data has been used from the old "works" designs so these really are the most modern high tech cam designs available today.

Manufactured from EN40B the best steel for camshafts. When nitrided it gives a surface hardness and finish similar to chilled iron and is used for many modern motorsport camshafts.

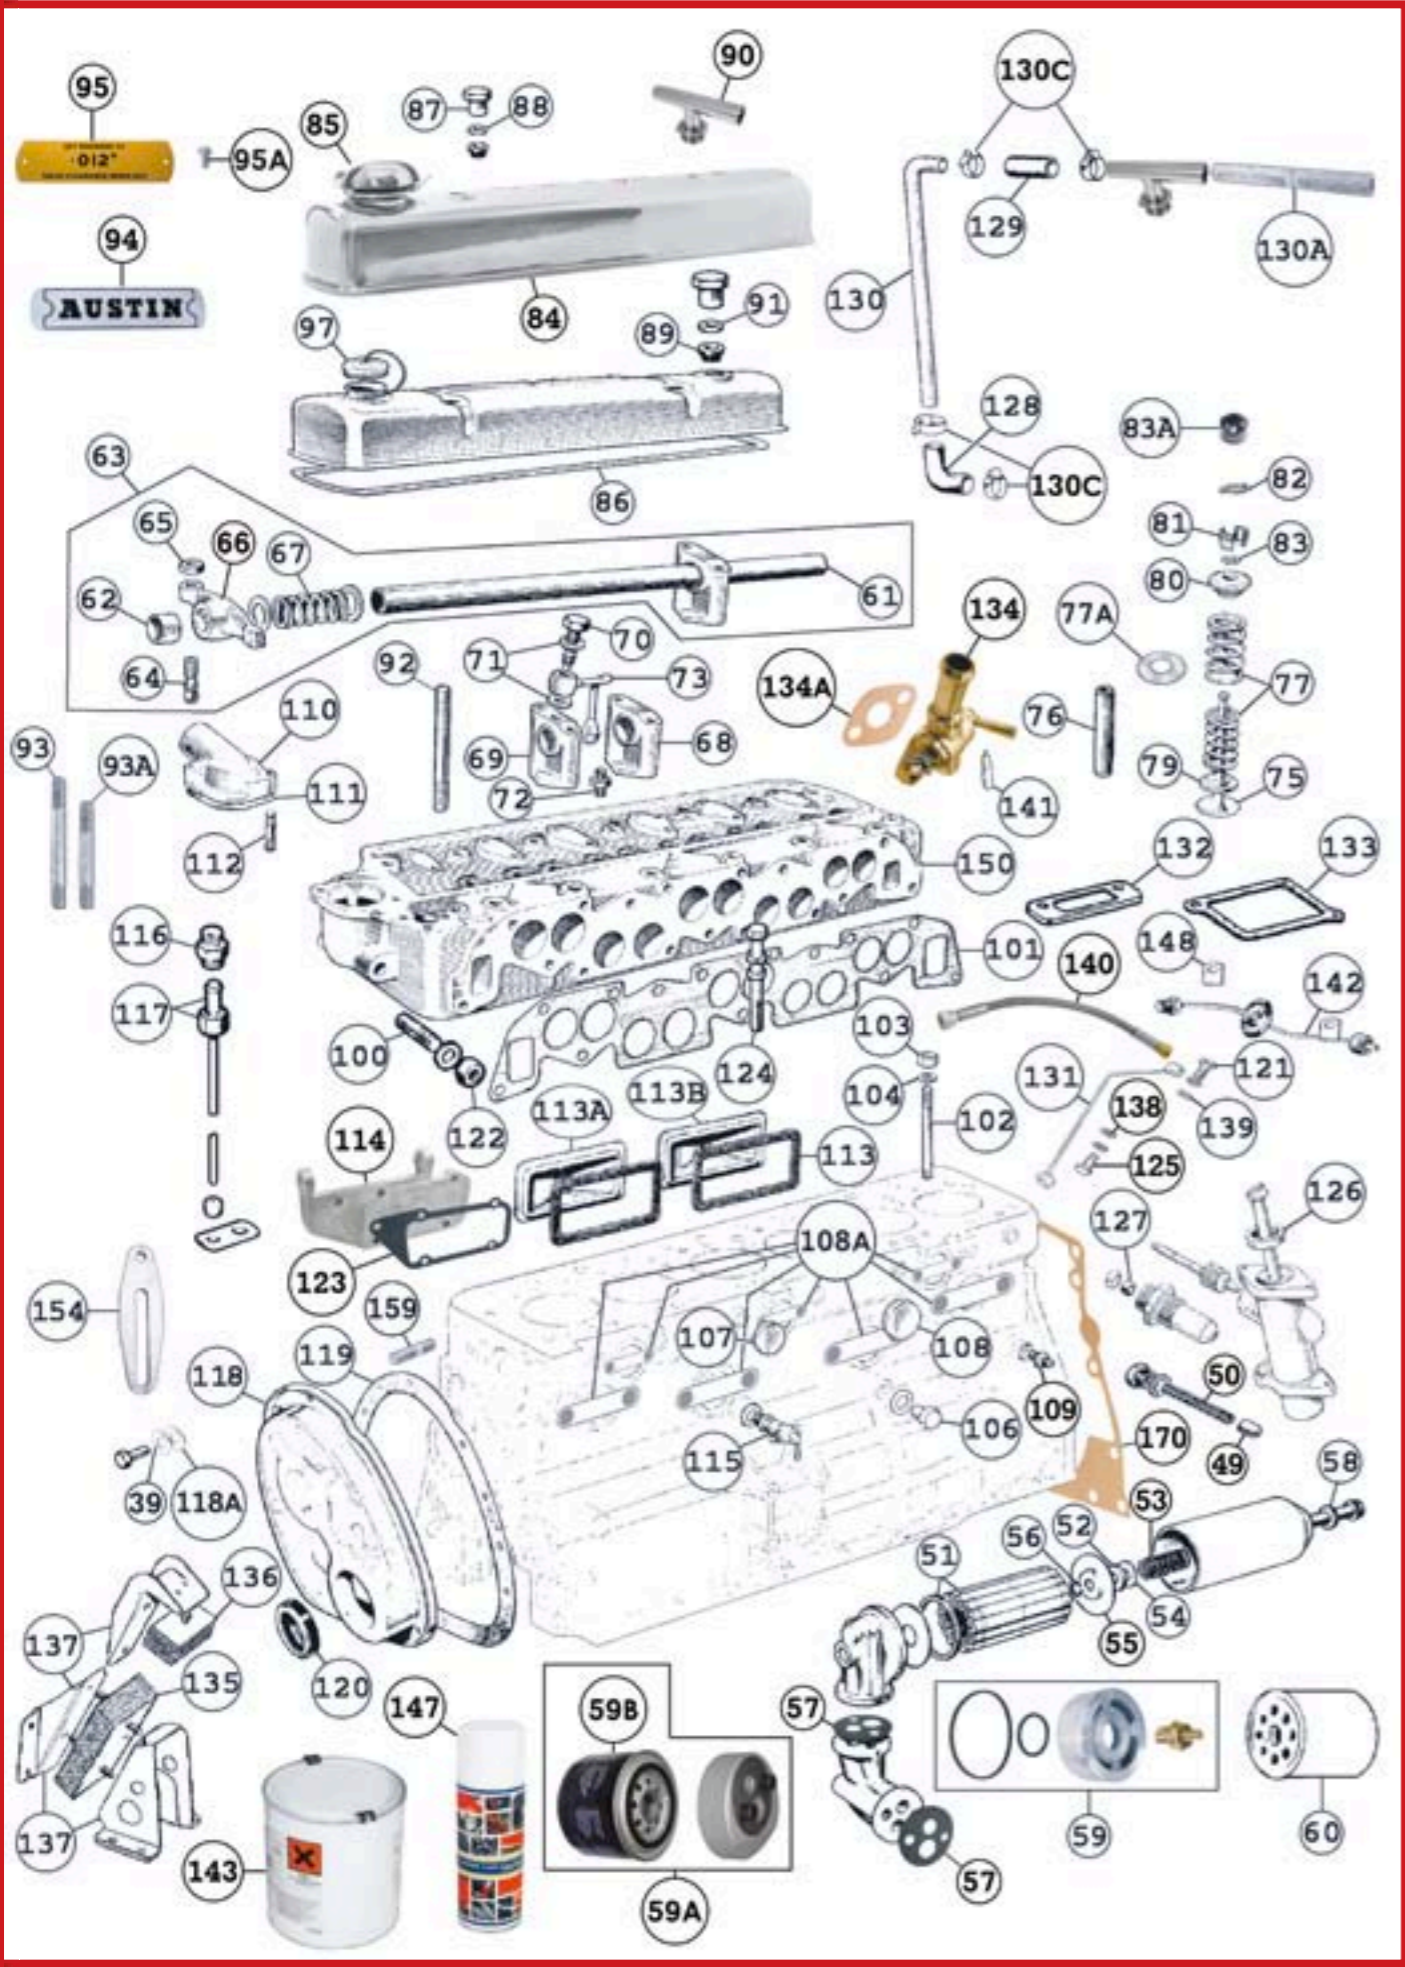

Extensive testing has been carried out to prove they perform better than any other Healey camshaft available. The modern design allows vastly improved volumetric filling efficiency meaning more power!!

With completely new ramp geometry and reduced valve lash they drastically decrease mechanical stress to the cam lobes and whole of the valve train. Kinder to your engine yet delivering more torque and BHP.
